Description

The ELRX223 series of devices are each consist of a GaAs infrared emitting diode optically coupled to a monolithic silicon random phase photo triac and a main output triac. They are designed for interfacing between electronic controls and loads to control inductive for 115 to 240 VAC operations. They are packaged in 8pin DIP package and available in surface mount SMD option.

Applications

- Home appliances
- Industrial equipment
- Switching motors, fans, heaters, solenoids and valces.
- Power control such as lighting and temperature control
