

HCPL-M452/HCPL-M453 Small Outline, 5 Lead, High Speed **Optocouplers**

Description

These small outline high CMR, high speed, diode-transistor optocouplers are single channel devices in a five lead miniature footprint. They are electrically equivalent to the following Broadcom[®] optocouplers.

The SO-5 JEDEC registered (MO-155) package outline does not require "through holes" in a PCB. This package occupies approximately one-fourth the footprint area of the standard dual-inline package. The lead profile is designed to be compatible with standard surface mount processes.

These diode-transistor optocouplers use an insulating layer between the LED and an integrated photon detector to provide electrical insulation between input and output. Separate connections for the photo-diode bias and output transistor collector increase the speed up to a hundred times over that of a conventional photo-transistor coupler by reducing the base-collector capacitance.

The HCPL-M452 is designed for high speed TTL/TTL applications. A standard 16 mA TTL sink current through the input LED provides enough output current for 1 TTL load and a 5.6 k Ω pull-up resistor. CTR of the HCPL-M452 is 19% minimum at $I_F = 16$ mA.

The HCPL-M453 is an HCPL-M452 with increased common mode transient immunity of 15,000 V/µs minimum at V_{CM} = 1500V guaranteed.

Features

- Surface mountable
- Very small, low profile JEDEC registered package
- Compatible with infrared vapor phase reflow and wave soldering processes
- Very high common mode transient immunity: 1,5000 V/ μ s at V_{CM} = 1500V guaranteed (HCPL-M453)
- High speed: 1 Mb/s
- TTL compatible
- Open collector output
- Worldwide safety approval:
 - UL1577 recognized, 3750Vrms/1min
 - CSA approved
- Lead-free option

Applications

- Line receivers: High common mode transient immunity (>1000 V/µs) and low input-output capacitance (0.6 pF).
- High speed logic ground isolation: TTL/TTL, TTL/LTTL, TTL/CMOS, TTL/LSTTL
- Replace slow phototransistor optocouplers
- Replace pulse transformers: save board space and weight
- Analog signal ground isolation: integrated photon detector provides improved linearity over photo-transistor type

CAUTION! The small device geometries inherent to the design of this bipolar component increase the component's susceptibility to damage from electrostatic discharge (ESD). Take normal static precautions in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

Ordering Options

SO-5 Package	Standard DIP	SO-8 Package			
HCPL-M452	HCPL-4502	HCPL-0452			
HCPL-M453	HCPL-4503	HCPL-0453			

NOTE: These devices equivalent to 6N135/6N136 devices but without the base lead.

Ordering Information

HCPL-M452 and HCPL-M453 are UL Recognized with 3750 Vrms for 1 minute per UL1577.

	Ор						
Part Number	non-RoHS RoHS Compliant Compliant		Package	Surface Mount	Tape and Reel	Quantity	
HCPL-M452	-000E	No option	SO-5	X		100 per tube	
HCPL-M453	-500E	#500		X	Х	1500 per tube	

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

Example 1:

HCPL-M452-500E to order product of SO-5 surface mount package in tape and reel packaging and RoHS compliant.

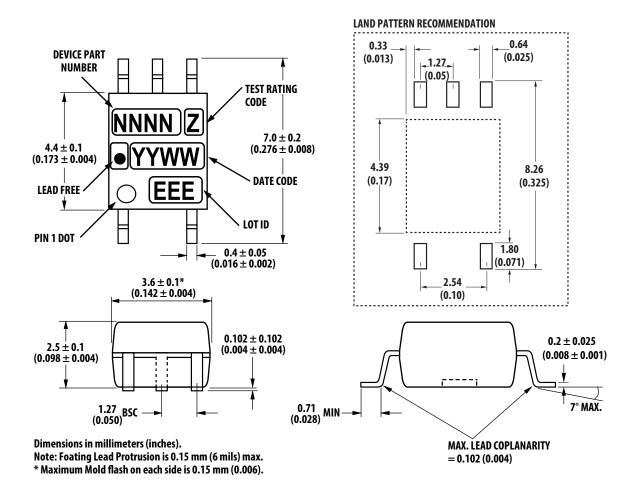

Example 2:

HCPL-M452 to order product of SO-5 surface mount package in tube packaging and non-RoHS compliant.

Option data sheets are available. Contact your Broadcom sales representative or authorized distributor for information

NOTE: The notation '#XXX' is used for existing products, while (new) products launched since July 15, 2001 and RoHS compliant will use '-XXXE.

Non-halide flux should be used.

Regulatory Information

The HCPL-M452/M453 are approved by the following organizations:

	Approved under UL 1577, component recognition program up to V_{ISO} = 3750 V_{RMS} expected prior to product release.
CSA	Approved under CSA Component Acceptance Notice #5.

a. All typicals at $T_A = 25$ °C.

d. The frequency at which the ac output voltage is 3 dB below its mid-frequency value.

b. The 1.9 k Ω load represents 1 TTL unit load of 1.6 mA and the 5.6 k Ω pull-up resistor.

c. Common transient immunity in a Logic High level is the maximum tolerable (positive) dV_{CM}/dt on the rising edge of the common mode pulse, V_{CM} , to assure that the output will remain in a Logic High state (that is, $V_O > 2.0V$). Common mode transient immunity in a Logic Low level is the maximum tolerable (negative) dV_{CM}/dt on the falling edge of the common mode pulse signal, VCM to assure that the output will remain in a Logic Low state (that is, $V_O < 0.8V$).
